What is Forex binary Trading.

Binary trading in Forex is an "all-or-nothing" speculation on whether a currency pair's price will rise or fall above a specific price (strike price) within a fixed timeframe. Traders decide on a currency pair, strike price, and expiration time, then place a "Up" or "Down" option. If their prediction is correct at expiration, they receive a fixed payout; if incorrect, they lose their entire investment for that trade.
